

Application No. 09/738,992

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A system for permitting collaborative annotations of a document, the system comprising:

a plurality of workstations each comprising a computer processor, a display, and a capture device for capturing a digital image of a document; and

a base computer communicating with the plurality of workstations;

wherein the system is operative to:

(a) identify handwritten annotations in digital images of the document ~~[[documents]]~~ captured at each workstation; ~~[[and]]~~

(b) communicate ~~[[the]]~~ data representing the identified annotation images to each workstation to permit an annotation entered at a first workstation to the document and an annotation entered at a second workstation to the document to be distributed to ~~[[other]]~~ the plurality of workstations;

(c) use the data representing the identified annotations for display with the digital images of the document at the plurality of workstations according to display criteria for each workstation; and

(d) displaying the digital images of the document at the workstations with one or more of the identified annotations entered at the first and second workstations;

wherein the one or more of the annotations are selectively displayed in accordance with the display criteria for each workstation.

2. (Currently Amended) ~~[[A]]~~ The system according to claim 1, wherein the system is operative to identify a new annotation made at a third workstation or an additional annotation made by the first or second workstations, and to update the distribution of annotations to the plurality of workstations.

3. (Currently Amended) ~~[[A]]~~ The system according to claim 1, wherein the capture device at at least one workstation comprises a camera.

Application No. 09/738,992

4. (Currently Amended) [[A]] The system according to claim 1, wherein the data representing each identified annotation is stored in the form of an annotation object, the annotation object comprising:

- (a) information representing the annotation as a bitmap; and
- (b) information indicating the location of the annotation in a document.

5. (Currently Amended) [[A]] The system according to claim 4, wherein the annotation object further comprises information representing the origin of the annotation.

6. (Currently Amended) [[A]] The system according to claim 4, wherein the annotation object further comprises information representing at least one of a time and date associated with the annotation.

7. (Currently Amended) [[A]] The system according to claim 4, wherein the annotation object further [[comprising]] comprises information representing the identity of the document with which the annotation is associated.

8. (Currently Amended) [[A]] The system according to claim [[1]] 5, wherein at least one of the plurality of workstations is operative to display annotations in a plurality of different colors according to its display criteria, the color being indicative of the origin of the annotation.

9. (Currently Amended) [[A]] The system according to claim 1, wherein each workstation is operative to identify handwritten annotations.

10. (Currently Amended) [[A]] The system according to claim 1, wherein the base computer is operative to identify handwritten annotations.

11. (Currently Amended) [[In a]] A method for distributing annotations to a document made at [[one]] a plurality of workstation of a collaborative annotation system to other workstations in the system for display, [[the improvement]] comprising:

- (a) capturing a digital image of [[an]] the document at each workstation;
- (b) identifying a portion of the digital image corresponding to a handwritten annotation in the document captured at a first workstation and a second workstation;
- [[and]]

Application No. 09/738,992

(c) distributing data representing the handwritten annotation to [[said other workstations for display]] each workstation to permit the annotation entered at the first workstation to the document and the annotation entered at a second workstation to the document to be distributed to the plurality of workstations;

(d) using the data representing the identified annotations for display with the digital images of the documents at the plurality of workstations according to display criteria for each workstation; and

(e) displaying the digital images of the documents at the workstations with one or more of the identified annotations entered at the first and second workstations;

wherein the one or more of the annotations are selectively displayed in accordance with the display criteria for each workstation; and

wherein the one or more of the annotations are selectable at each workstation for retrieving information associated with each selectively displayed annotation, including information concerning each annotation's creation and author.

12. **(Currently Amended)** A method for permitting collaborative annotation of a document in a system which comprises:

a plurality of workstations each comprising a computer processor, a display, and a capture device for capturing a digital image of a document; and

a base computer communicating with the plurality of workstations;

wherein the method comprises:

(a) identifying handwritten annotations in digital images of the document [[documents]] captured at each workstation; [[and]]

(b) communicating [[the]] data representing the identified annotation images to each workstation to permit an annotation entered at a first workstation to the document and an annotation entered at a second workstation to the document to be distributed to [[other]] the plurality of workstations; and

(c) using the data representing the identified annotations for display with the digital images of the document at the plurality of workstations according to display criteria for each workstation;

Application No. 09/738,992

(d) displaying the digital images of the document at the workstations with one or more of the identified annotations entered at the first and second workstations;

wherein the one or more of the annotations are selectively displayed in accordance with the display criteria for each workstation.

13. (Currently Amended) [[A]] The method according to claim 12, further comprising [[the step of]] identifying a new annotation made at a third workstation or an additional annotation made by the first or second workstations, and updating the distribution of annotations to [[other]] the plurality of workstations.

14. (Currently Amended) [[A]] The method according to claim 12, further comprising [[the step of]] capturing an image at at least one workstation using a camera device.

15. (Currently Amended) [[A]] The method according to claim 12, wherein each identified [[annotations are]] annotation is stored as annotation objects comprising:

(a) information representing the annotation as a bitmap; and

(b) information indicating the location of the annotation in a document.

16. (Currently Amended) [[A]] The method according to claim 15, wherein the annotation object further comprises information representing the origin of the annotation.

17. (Currently Amended) [[A]] The method according to claim 15, wherein the annotation object further comprises information representing at least one of a time and date associated with [[the]] each identified annotation.

18. (Currently Amended) [[A]] The method according to claim 15, wherein the annotation object further comprises information representing the identity of the document with which the annotation is associated.

19. (Currently Amended) [[A]] The method according to claim 12, further comprising selectively displaying, at a third workstation, a plurality of annotations originating from at least [[two different other]] the first and second workstations.

20. (Currently Amended) [[A]] The method according to claim 19, wherein each annotation is selectively displayed in a color indicative of the origin of the

Application No. 09/738,992

annotation according to the display criteria.

Please add the following new claims:

21. (New) The system according to claim 1, wherein the one or more of the annotations are selectable at each workstation for retrieving information associated with each selectively displayed annotation, including information concerning each annotation's creation and author.

22. (New) The method according to claim 12, wherein the one or more of the annotations are selectable at each workstation for retrieving information associated with each selectively displayed annotation, including information concerning each annotation's creation and author.
